GLOBAL WARMING

What is an example of a disease-carrying insect and a disease they might spread?

Answer: Mosquitoes and Malaria

What are some of the symptoms of heat stroke and who are more at risk?

Answer: Confusion, coma, and death. Elderly people, infants, and obese people.

How can the aftermath of a storm be more dangerous than the storm itself?

Answer: Lack of clean drinking water after severe storms can make diseases more difficult to manage. People can die from intestinal diseases after a severe storm.
