

**Drag the correct word(s) from the list to complete the sentence.**

**fibers**

**reservoir**

- d) One way to recycle is to make something new out of something old.
- e) A source of drinking water is called a \_\_\_\_\_.
- f) \_\_\_\_\_ are thread-like substances used to weave textiles, carpets, and fabrics.

Many places are now passing laws to encourage new buildings to be “green.” **Green buildings** are designed with the goals of lowering greenhouse gas emissions, using less **toxic materials**, and reducing waste. Green buildings can lower greenhouse gas emissions in several ways.

Remember that the manufacture of products results in a lot of greenhouse gas emissions. Green buildings use more recycled products, such as carpets made from recycled fibers and wood reclaimed from older buildings. Green buildings may also favor products from industries that have made progress in reducing greenhouse gas emissions.

# Carbon Neutral Home

## **SUPER INSULATION**

7 inches (180 mm) of high performance insulation wraps the whole house walls to keep the heat inside the home
