

Drag the word(s) to answer the questions.

WELL DONE!

South

What direction is at the bottom of a map?

North

What direction is at the top of a map?

East

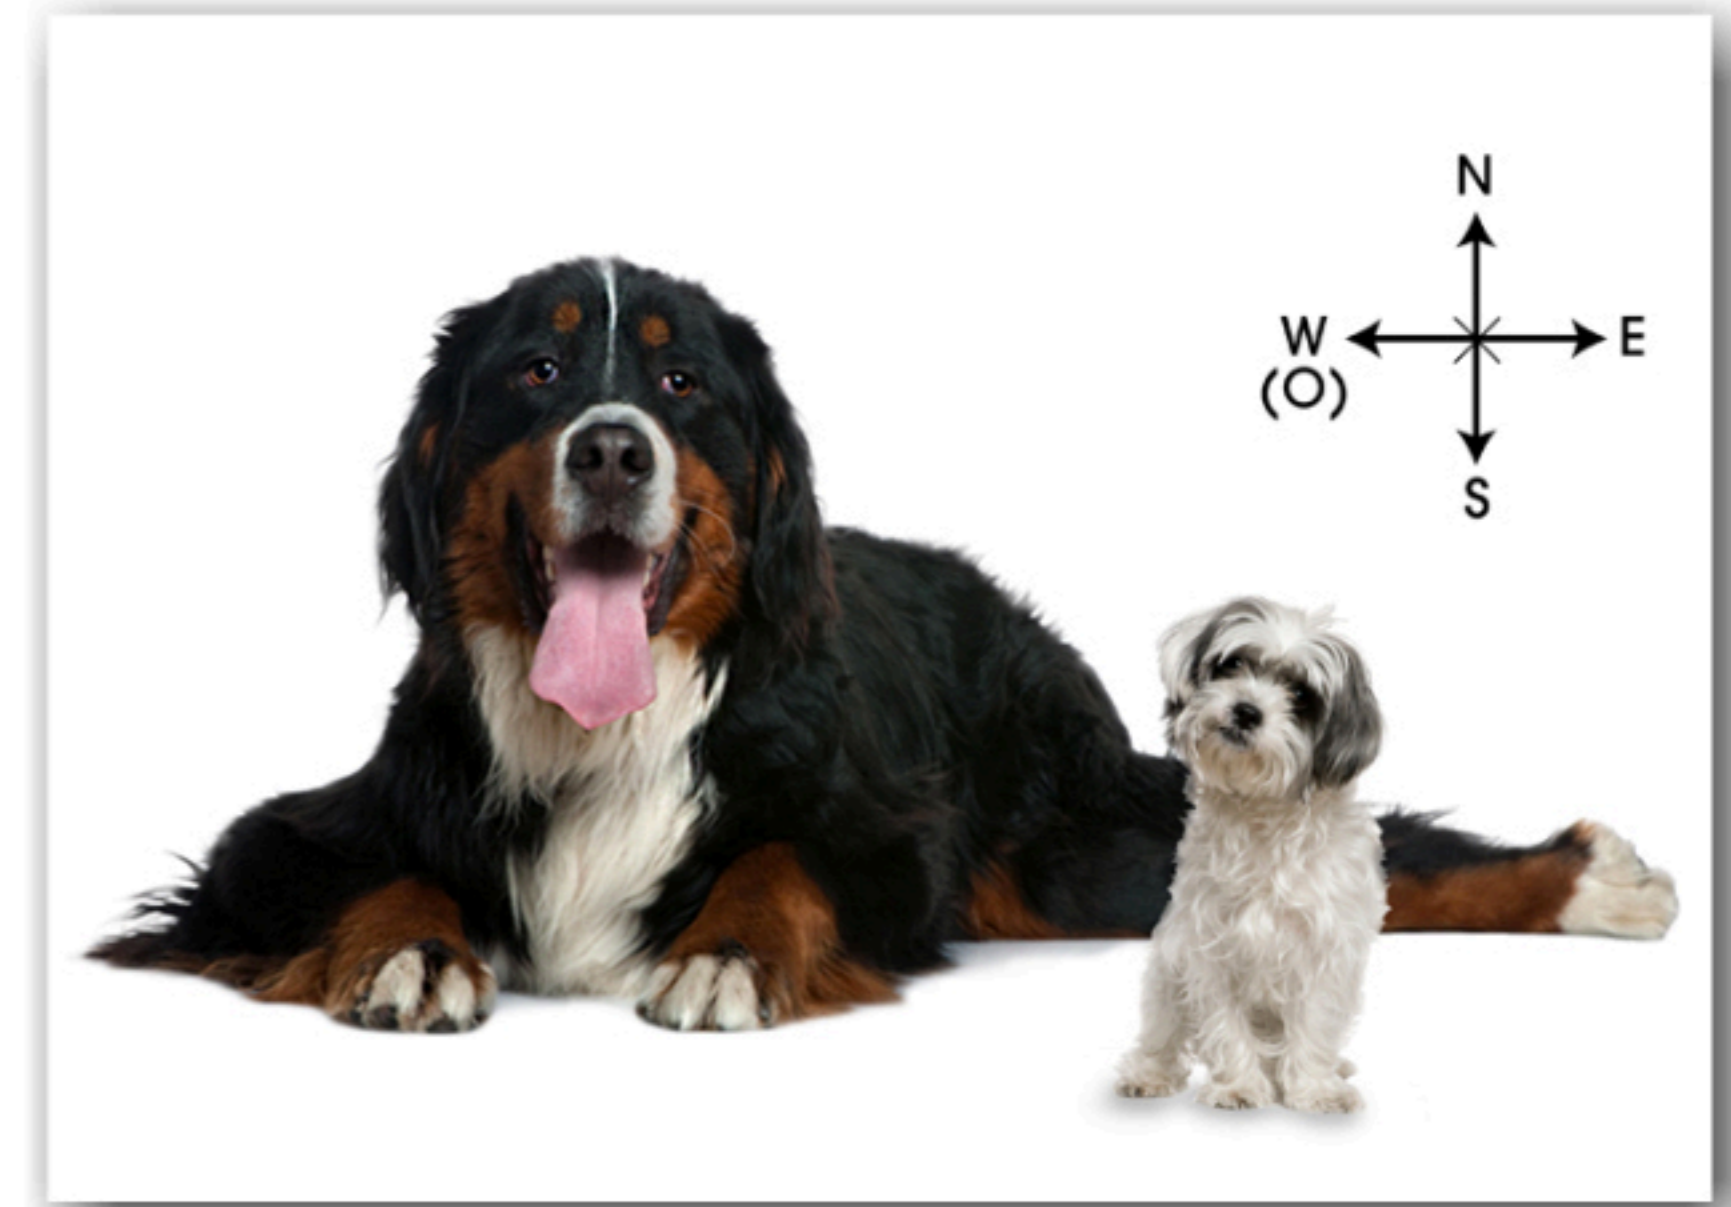

What direction is at the right of a map?

Relative Location means where a place is from another place. For example, the school is west of the library.

Places can be found by looking at where they are from another place. For example, in the picture, the bigger dog is to the left or West of the smaller dog. Places can also be North, South or East of each other.
