There are four ecosystems: Deserts, which include Tundra and Ice; Wetlands, which include Humid Subtropical and Tropical Wet climates; Grasslands, which include Semiarid and Highlands; and Forested, which include Humid Continental and Subarctic climates.

Choose a continent to enlarge it. Antarctica has been left out. Touch a colored dot corresponding to an ecosystem to select it. Touch its matching location on the world map. If correct, a score will be added to your total. Do this for all 4 ecosystems in each of the 6 continents.
