Reading Passage

NAME:

The World Wide Web

he development of computer technology in the 20th century led computer-based communications network known as the internet. During the Cold War, the United States Defense Department developed the idea of a non-centralized network of computers that could transmit comp Because information could be transmitted along any path in the system, the destruction of one part of the system by war tactics would not disrupt communications among all other parts of the system. However, the use of the internet quickly expanded beyond defense. By the 1980s, many institutions used the internet for communications of all kinds, such as the sharing of scientific data and cataloging information from the Library of Congress. Up to this point, information on the internet could only be shared in text form. However, the invention of the World Wide Web in the early 1990s, allowed all kinds of digital information, including images and sound, to be transmitted over the internet

What is the internet?

The Internet Era

In 1993, the developers of the World Wide Web announced that the web technology would be freely available to everyone without charge. Inventions of web browsers and the computer mouse allowed people to view web pages and follow hyperlinks to other pages. Because web technology was freely available, computer programmers from all around the world added applications and software to the internet. Each year saw a huge growth in every aspect of the internet,

Hands-On Activity # 4

Communications Technology Fair

from the number of users to the number of web pages

available. The use of the internet expanded from the exchange of information among scholarly and governmental institutions to private communications and commercial transactions of all kinds. By 1998, over 750,000 commercial sites existed on the World Wide Web. The 2000s saw the development of social networking sites, which have become a popular way for friends and family to keep in touch across great distances in a globalized world. During the same period, cell phone technology merged with the internet to further increase access to the World Wide Web. Many people now rely on the World Wide Web for most forms of communication, including entertainment, news, business, and personal relationships.

Activity Four

In this activity, you and your classmates will learn about many different modern

exchange information for business, research, and educational purpose

technologies that people use for any of the following uses

• staying in touch with family and friends

• keeping up with news and world events

about. Students may work alone or in teams.

How does the technology work?

How does the technology help people?

How does the technology affect globalization?

photographs of the technology and/or its applications.

work and business

education

communications technologies that help people around the world stay connected and

First, use the internet or library resources to research a list of 10-20 different communications

Second, have each student in your class choose a technology from the list to learn more

Once you have chosen your product, research answers to the following questions:

Make a poster presentation that answers all of the questions above and contains

Third, set up a Communications Technology Fair in your classroom or common school

area, such as the auditorium. Display the posters and products on tables, and have students stand near their displays to answer questions. Invite students, teachers, parents,

and other members of your school community to walk through the Communications

What devices do people use to access the technology?

What other technologies support the use of this technology?
